Group Task - Module 1

# Foundations of AI:Historical Milestones &Core Concepts

## GROUP DEBATE .IS AI A BOON OR THREAT TO HUMANITY

### Introduction:

### 1. Healthcare Improvements

AI helps in early disease detection, medical imaging, and robotic surgeries. For example, AI is used in hospitals like Apollo Hospitals to assist doctors in diagnosis.

### 2. Education Support

AI tools like Khan Academy use AI to personalize learning for students.

### 3. Automation & Productivity

Companies like Amazon use AI for recommendations and warehouse automation, making processes faster and efficient.

### 4. Daily Life Convenience

AI powers:
Voice assistants like Google Assistant
Navigation apps like Google Maps
Fraud detection in banking

### 5. Scientific Research

AI helps in climate prediction, space research, and drug discovery.
Conclusion (Boon Side):
AI improves efficiency, saves time, supports humans, and solves complex problems.

🟥 Team 2: AI is a Threat (Negative Side)

### 1. Job Displacement

Automation may replace human workers in factories, customer service, and even IT jobs.

## 2. Privacy Issues

Companies like Meta collect large amounts of user data, raising privacy concerns.

## 3. Deepfakes & Misinformation

AI-generated fake videos can spread misinformation and harm reputations.

## 4. Bias & Discrimination

If AI is trained on biased data, it can produce unfair decisions in hiring or law enforcement.

## 5. Autonomous Weapons

Military AI systems can be misused, increasing global risks.

## Conclusion (Threat Side):

Without regulation and ethics, AI can harm society, increase unemployment, and create security risks.

## 🎤 How to End the Debate (Balanced View)

## You can conclude:

AI itself is neither good nor bad. It depends on how humans design, regulate, and use it. With proper laws and ethical guidelines, AI can be more of a boon than a threat.
